<p>Investment Strategy</p>	<p>SBI Debt Fund Series is a Close-ended Debt Scheme and the objective is to provide regular income, liquidity and returns to the investors through investments in a portfolio comprising of debt instruments such as Government of India dated Securities, Treasury Bills, Money Market instruments, Bonds/Debt Instruments including Securitized Debt.</p> <p>Investments under SDFS series would be made only in securities which mature on or before the date of the maturity of the Scheme. The scheme has the flexibility to invest in the entire range of debt instruments and would seek to minimize interest rate risk while avoiding credit risks. The issuer selection for credit exposure would be based on financial parameters such as Turnover, Net Worth, Gearing, Interest Coverage Ratio and Profitability track record. Companies in the investment universe are initially screened on the basis of Management quality, Business and Industry analysis & Feedback from creditors/ Rating agencies. Companies which meet the initial screening norms are then evaluated on the financial norms for consideration in the investment. The scheme would make investment in securities in the investment universe based on market spreads and liquidity, so as to match the investment horizon with the scheme maturity. Investment in sovereign papers would be based on interest rate expectations arising out of macroeconomic analysis. This includes analysis of inflation data and trends in macro variables such as credit growth, liquidity, money supply growth, fiscal numbers and the global interest environment.</p> <p>Features differentiating among different series of funds are as follows:</p> <p>90 day Fund: Maturity: The fund matures at the end of 90 days. Investor profile: Ideally suited for investors with investment horizon of 90 days Liquidity: In normal market situation, 90 day papers have very high liquidity compared to higher maturity papers (6 Months, 1 Year etc) Yield: In normal market conditions, the yield of the portfolio constructed with papers maturing around 90 days will be lower than higher maturity papers (6 Months, 1 Year etc) Securities: The fund will invest in short term debt assets.</p> <p>180 day Fund: Maturity: The fund matures at the end of 180 days. Investor profile: Ideally suited for investors with investment horizon of 180 days Liquidity: In normal market situation, 180 day papers have lower or similar liquidity compared to 90 day papers and similar or higher liquidity compared to higher maturity papers (1 Year etc) Yield: In normal market conditions, the yield of the portfolio constructed with papers maturing around 180 days will be higher than 90 day fund but lower than higher maturity papers (1 Year, 2 Years etc) Securities: The fund will invest in short term debt assets.</p> <p>367 day Fund: Maturity: The fund matures at the end of 367 days. 	<p>Securities: The fund will invest in short term debt assets with maturity not exceeding 367 days.</p> <p>18 months Fund:</p> <p>Maturity: The fund matures at the end of 18 months.</p> <p>Investor profile: Ideally suited for investors with investment horizon of 18 Months</p> <p>Liquidity: In normal market situation, 18 month papers have lower liquidity compared to 90 day, 180 day & 1 year papers and similar or higher liquidity compared to higher maturity papers (2 Years etc)</p> <p>Yield: In normal market conditions, the yield of the portfolio constructed with papers maturing around 18 months will be higher than 90 day, 180 day & 1 year fund but lower than higher maturity papers (2 years etc)</p> <p>Securities: The fund will invest in medium term debt assets.</p> <p>Risk Profile of the Scheme Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:</p> <ol style="list-style-type: none"> a. SBI Debt Fund Series (SDFS) will be investing in debt instruments, Government Securities and money market instruments (such as term/notice money market, repos and reverse repos). Trading volumes and settlement periods inherently restrict the liquidity of the scheme's investments. In the event of a restructuring of the scheme's investment portfolio, these periods may become significant. b. Debt & money market securities investments under the scheme may also be subject to the following risks: <ol style="list-style-type: none"> I. Credit risk: Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations. II. Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security. III. Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk. IV. Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
<p>Risk Control</p>	<p>Investments in debt securities carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification.</p> <p>In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.</p> <p>Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.</p>

Key Information Memorandum

	<p>For risk control, the following may be noted:</p> <p>Liquidity risks: The liquidity of the Scheme’s investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.</p> <p>Interest Rate Risk: Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk. Additionally, the fund will invest in securities maturing on or before the maturity of the fund. Hence, while the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.</p> <p>Volatility risks: There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. Further, the fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. To that extent the Volatility risk will be mitigated in the scheme.</p> <p>Credit Risks Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.</p>
<p>Credit evaluation policy</p>	<p>Credit Analysis is a bottom up approach starting with looking at each individual issuer, industry, terms and covenants of a particular issue, etc. Individual issuer level exposures are taken only after approval from investment committee, i.e. issuer becoming part of “Accepted Credit Universe”. A team of credit analyst will do a detailed analysis and prepare an initiation note to introduce an issuer to the universe.</p> <p>For every issuer we focus on 4 Cs of credit</p> <ul style="list-style-type: none"> ● Character - Refers to a borrower’s reputation ● Capacity - Measures a borrower’s ability to repay a loan by comparing income against recurring debts ● Collateral - Assets to secure the debt ● Covenants - Terms and conditions of the loan itself <p>Key focus areas are</p> <ul style="list-style-type: none"> ● Management Quality ● Financial Analysis ● Business Analysis ● Industry Analysis ● Regulatory Environment ● Feedback from Creditors ● Other Issues; auditor report and qualifications, etc <p>Regular management interaction at various levels, supported by plant visits, interaction with rating agencies is part of the process.</p>
