Change in asset allocation:

The above investment pattern is indicative and may be changed by the Fund Manager for a short term period on defensive considerations, keeping in view market conditions, market opportunities, as per SEBI (MF) Regulations, 2026 and clause 1.9.1(b) of SEBI Master Circular for Mutual Funds dated March 20, 2026, legislative amendments and other political and economic factors, the intention being at all times to seek to protect the interests of the Unit Holders. If the exposure falls outside the above-mentioned asset allocation pattern, the portfolio to be rebalanced by AMC within 30 calendar days from the date of said deviation.

Portfolio rebalancing

Pursuant to clause 3.11 of Master Circular for mutual funds in case the fund manager for any reason is not able to rebalance the asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of AMC) within 30 business days from the date of deviation, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period.

	Further, it will follow timelines for rebalancing of portfolios of Mutual Fund Schemes, reporting & disclosure requirements in pursuant to the clause 3.11 of Master Circular of Mutual funds dated March 20, 2026. Timelines for deployment of funds collected in NFO: Pursuant to clause 7.24 of SEBI Master Circular for Mutual Fund dated March 20, 2026; the fund manager shall aim to deploy the funds garnered during the NFO within 30 business days from the date of allotment of units. In an exceptional case, if the fund manager is not able to deploy the funds within 30 business days as per the scheme's asset allocation, reasons in writing, including details of efforts made to deploy the funds, will be placed before the Investment Committee. The Investment Committee, after examining the root cause for delay in deployment, may extend the timeline by 30 business days. Apart from the investment restrictions prescribed under SEBI (MF) Regulations, the fund follow internal norms vis-à-vis limiting exposure to a particular scrip or sector, etc. There can be no assurance that the investment objective of the scheme will be achieved.
Investment Strategy	The Scheme seeks to follow a balanced and disciplined approach to asset allocation by investing in a mix of equity and equity-related instruments and debt and money market instruments, in line with the allocation range prescribed for the Balanced Hybrid category. The objective is to create a balanced portfolio that can participate in equity market growth while simultaneously anchoring stability through fixed-income exposure. By blending these two asset classes, the Scheme aims to offer investors a smoother and more balanced investment experience across different market environments, with reduced volatility relative to pure equity strategies. Equity Allocation: The equity component of the Scheme is intended to be the primary driver of long term capital appreciation. This portion of the portfolio will be invested in a diversified mix of companies across sectors, themes and market capitalisations, enabling participation in broad based economic and corporate growth. The equity strategy will follow a structured and research driven approach, balancing return potential with prudent risk management. Stock selection will be based on, but not limited to: • Assessment of business fundamentals and earnings outlook, • Financial strength, balance sheet quality, and cash flow profile, • Quality of management and corporate governance standards, • Competitive positioning and long term growth prospects, • Prevailing macroeconomic and sectoral trends. The approach will aim to balance return potential with appropriate risk control in line with the Balanced Hybrid mandate. Debt Allocation: The debt component of the Scheme is designed to provide income stability, liquidity, and risk mitigation, acting as a counterbalance to equity market fluctuations. Investments will be made across fixed income and money market instruments, including Government securities and corporate bonds, Units of Debt oriented mutual fund schemes with the objective of generating steady accrual and maintaining portfolio resilience. Selection of debt and money market instruments will be based on, but not limited to: • Evaluation of interest rate outlook and monetary policy environment, • Yield curve dynamics, spreads, and relative value opportunities, • Liquidity conditions and market behaviour,

	• Creditworthiness, issuer fundamentals, and internal credit assessment, • Macroeconomic indicators such as inflation, fiscal stance, and systemic liquidity. The debt allocation will emphasise prudent duration and credit management. Derivatives Strategy: The Scheme may take exposure to derivatives for non-hedging purpose as permitted by regulations from time to time. Such exposure to derivative instruments will be in line with the investment objective and overall strategy of the scheme. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies”. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. For detailed derivative strategies, please refer to SAI. Overall, the Scheme seeks to provide investors with a balanced and disciplined asset mix, blending equity led appreciation with the relative stability of fixed income, making it suitable as a core allocation for moderate risk investors. The scheme will predominantly be actively managed to achieve its investment objective.
Risk Profile of the Scheme	SBI Balanced Hybrid Fund will be investing in Equity and Equity related instruments, Debt securities (including securitized debt & Debt Derivatives) and money market instruments, Derivatives, foreign securities including ADR/GDR/Foreign equity and overseas ETFs and Debt Securities, Repo / Reverse repo transactions in corporate debt securities, securities lending and borrowings, units of Debt Mutual Fund, Instruments having special features, Credit Enhancement / structured obligations such as corporate / promoter guarantee, Credit Default Swaps, Unrated Instruments and Unlisted Instruments. Trading volumes and settlement periods inherently restrict the liquidity of the scheme’s investments. In the event of a restructuring of the scheme’s investment portfolio, these periods may become significant. Investment in equity & equity related investments may be subject to the following risks: a) Equity and Equity related instruments are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro-economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme. b) The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio. c) Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. Debt & money market instruments investments under the scheme may also be subject to the following risks:

- a) **Credit Risk:** Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations.
- b) **Liquidity Risk:** Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.
- c) **Interest Rate:** Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.
- d) **Reinvestment Risk:** This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
- e) **Risk associated with unrated debt instruments:** Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities such as credit risk, interest rate risk etc. However, investments in unrated instruments are subject to greater risk of loss of principal and interest than rated instruments.

Securitized debt investments under the scheme may also be subject to the following risks:

- a) **Liquidity Risk:** There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.
- b) **Limited Recourse:** The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.
- c) **Delinquency and Credit Risk:** Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly investor pay-outs to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However, many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.
- d) **Risks due to possible prepayments:** Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.
- e) **Bankruptcy of the Originator or Seller:** If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

Derivatives under the scheme may also be subject to the following risks:

- a) The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Investors should understand that derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include but are not limited to the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. There may be a cost attached to selling or buying futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares. The possible lack of a

liquid secondary market for a futures contract or listed option may result in inability to close futures or listed option positions prior to their maturity date.

b) Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.

c) No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Securities lending may be subject to the following risk:

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. If the Scheme undertakes stock lending under the regulations, it may be exposed to the risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary

Risks associated with Investing in ADR/GDR/Foreign Securities:

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in Foreign Securities including foreign equities. Such investments carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- It is the AMC's belief that investment in Foreign Securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme would invest only partially in Foreign Securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme.
- Overseas investments will be made subject to any/all approvals, conditions thereof as may be stipulated under the SEBI Regulations or by RBI and provided such investments do not result in expenses to the Scheme(s) in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing.
- To the extent that the assets of the Scheme will be invested in Foreign Securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

Risks associated with segregated portfolio:

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time there is recovery of money from the issuer.
2. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity, as there may not be active trading of units in

the stock market. Further trading price of units on the stock market may be at a significant discount compared to the prevailing NAV.

3. Securities which are part of the segregated portfolio may or may not recover any money, either fully or partially.

Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non guaranteed basis. Credit risks could arise if the counterparty does not return the security as contracted on due date. The liquidation of underlying bonds in case of counterparty default would depend on the liquidity of the bond and market conditions at that time. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also, operational risks are lower as such trades are settled on a DVP basis. In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

Risk factors associated with imperfect hedge using Interest Rate Futures

1. The cost of hedge can be higher than adverse impact of market movements.
2. Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market. This may lead to the hedging position not giving the exact desired hedge result.
3. Derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
4. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities.

Illustration for Imperfect Hedge on Interest Rate Futures

Security	Market Value (in Cr.)	Weight in the Portfolio	Yield (%)	Modified Duration	Weighted Modified Duration
GOI 7.35% 22.06.2024	50.00	10.64%	7.05	5.00	0.53
GOI 6.79% 15.05.2027	400.00	85.11%	7.03	6.85	5.83
GOI 6.68% 17/09/2031	20.00	4.26%	7.08	8.71	0.37
	470.00				
679GS2027 IRF	100.99				

Consider a hypothetical portfolio or a part of a larger portfolio composed of 3 different securities with a Portfolio Average Modified Duration of 6.74. On account of change in economic factors, it is expected that the interest rates could go up by 1% over the coming days. The portfolio would look to hedge the impact on this portfolio through selling IRF, of which the underlying security is different as given. This would be an example of imperfect hedge where the portfolio that is hedged and the instrument underlying the futures contract are different. The maximum number of contracts in IRF to sold is given by the following formula = (Market Value portfolio * Modified Duration of portfolio)/ (Market Value of 1 Futures contract* Modified Duration of futures)

The impact on portfolio due to a 1% rise in yields is approx Rs. 31.65 crs. Since the portfolio has sold IRF contracts, the gain on account of the same is around Rs. 31.65 crs. Accordingly, the loss on the underlying portfolio is hedged through IRF even as the underlying securities are different. The scheme would pursue imperfect hedging to the extent permitted by extant SEBI guidelines.

Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities.

Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

Risk factors associated with instruments having special features

- The scheme shall invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital. The instrument is also convertible to equity upon trigger of a pre-specified event for loss absorption as may be decided by the RBI.
- The debt instruments with special features are considered as Non-Convertible Debentures, may be treated as debt instruments until converted to equity.
- The instruments are subject to features that grants issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus, debt instruments with special features are subject to "Coupon discretion", "Loss Absorbency", "Write down on Point of Non-viability trigger (PONV) event" and other events as more particularly described as per the term sheet of the underlying instruments.

The instrument is also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

In addition to the risks associated with derivative instruments, listed below are the risks associated with writing covered call options.

Market Risk:

Appreciation in the underlying equity shares could lead to loss of opportunity in case of writing of covered call option. In case if the appreciation in equity share price is more than the option premium received, the appreciation in the scheme would be capped

Liquidity Risk:

This strategy of writing covered call in a scheme will be used, provided the scheme has adequate number of underlying equity shares as per regulatory requirement. Subsequently, the scheme will have to set aside a portion of investment in the underlying equity shares. Further, in case the covered call options are sold to the maximum extent as allowed under the purview of regulations, the scheme would be unable to sell the shares of the respective stock, to the extent that would be blocked under the covered call. Hence, if the call option contracts which have been written become illiquid, it may lead to a loss of opportunity or can cause exit issues. As a result, it may happen that the scheme is not able to sell the underlying equity shares immediately, which can lead to temporary illiquidity of the underlying equity shares and may result in loss of opportunity.

Covered call strategy

The scheme may write call options only under a covered call strategy for constituent stocks of NIFTY 50 and BSE SENSEX, and any other stock as and when allowed by SEBI, subject to the following:

- a) The total notional value (taking into account strike price as well as premium value) of call options written by a scheme shall not exceed 15% of the total market value of equity shares held in that scheme.
- b) The total number of shares underlying the call options written shall not exceed 30% of the unencumbered shares of a particular company held in the scheme. The unencumbered shares in a scheme shall mean shares that are not part of Securities Lending and Borrowing Mechanism (SLBM), margin or any other kind of encumbrances.
- c) At all points of time the Mutual Fund scheme shall comply with the provisions at paragraph (a) and (b) above. In case of any passive breach of the requirement at paragraph (a), the respective scheme shall have 7 trading days to rebalance the portfolio. During the rebalancing period, no additional call options can be written in the said scheme.
- d) In case a Mutual Fund scheme needs to sell securities on which a call option is written under a covered call strategy, it must ensure compliance with paragraphs (a) and (b) above while selling the securities.
- e) In no case, a scheme shall write a call option without holding the underlying equity shares. A call option can be written only on shares which are not hedged using other derivative contracts.
- f) The premium received shall be within the requirements prescribed in terms of paragraph 5 of SEBI circular dated August 18, 2010 i.e. the total gross exposure related to option premium paid and received must not exceed 20% of the net assets of the scheme.
- g) The exposure on account of the call option written under the covered call strategy shall not be considered as exposure in terms of paragraph 3 of SEBI Circular no. Cir/IMD/DF/11/2010, dated August 18, 2010.
- h) The call option written shall be marked to market daily and the respective gains or losses factored into the daily NAV of the respective scheme(s) until the position is closed or expired.

Benefits of using Covered Call strategy in Mutual Funds:

The covered call strategy can help in earning income and hedging risk and subsequently result in better risk adjusted returns for the Scheme. Following are the benefits offered by this strategy:

- a. Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b. Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Example of Covered Call

	Illustrations: Buy 100 stocks of Company A at Rs 1000 and write (sell) call options of the company A for the same month, with a strike price of Rs 1050. Assume the said option is trading at Rs 10. Thus, the total premium received for selling the call option is Rs 1000 (Rs 10*100 lot size). On the day of expiration of options contract: Scenario 1: markets goes up and the stock price of company A goes upto Rs 1030 a) Gain on stock is Rs 3000. b) The call option will expire worthless (strike price is Rs 1050 and underlying price is Rs 1030). Thus, as a writer (seller) of call option, we can keep the premium of Rs 1000. c) Thus, net gain is Rs 4000 (Rs 3000 on underlying stock and Rs 1000 premium collected) Scenario 2: markets goes up and the stock price of company A goes upto Rs 1100 a) Gain on stock is Rs 10000 b) The call option is in the money by Rs 50 (strike price is Rs 1050 and underlying price is Rs 1100). Thus, as a writer (seller) of call option we must pay Rs 5000 to option buyer (Rs 50) and we would receive option premium of Rs. 1000 (Rs. 10*100), thus, the total loss would be Rs. 4000 (Rs. 5000 – Rs. 1000 received as the option premium). c) Thus, net gain is Rs 6000 (Rs 10000 on underlying stock and Rs 4000 loss on option position) Scenario 3: markets goes down and the stock price of company A goes down to Rs 950 a) Loss on stock is Rs 5000 b) The call option will expire worthless (strike price is Rs 1050 and underlying price is Rs 950). Thus, as a writer (seller) of call option, we can keep the premium of Rs 1000. c) Thus, net loss is Rs 4000 (Rs 5000 on underlying stock and Rs 1000 premium collected)
