I. INTRODUCTION

A. RISK FACTORS

1. Standard Risk Factors

- a. Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the Fund's objective will be achieved.
- b. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
- c. Past performance of the Sponsor / AMC / Mutual Fund or its affiliates does not guarantee the future performance of the scheme(s) of the Mutual Fund.
- d. State Bank of India, the sponsor, is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution made by it of an amount of Rs. 5 lakhs towards setting up of the mutual fund.
- e. SBI Balanced Advantage Fund ('the Scheme') is only the name of the Scheme and does not, in any manner, indicate either the quality of the Scheme or its future prospects and returns.
- f. The NAV of the Schemes' Units may be affected by change in the general market conditions, factors and forces affecting capital markets in particular, level of interest rates, various market related factors and trading volumes.
- g. The present scheme is not a guaranteed or assured return scheme.
- h. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.

2. Scheme-specific Risk Factors

- a. SBI Balanced Advantage Fund will be investing in Equity and equity related instruments including derivatives, debt instruments, Government Securities and money market instruments (such as term/notice money market and reverse repos). Trading volumes and settlement periods inherently restrict the liquidity of the scheme's investments. In the event of a restructuring of the scheme's investment portfolio, these periods may become significant.

b. Investments under the scheme may also be subject to the following risks:

I. Investment in Equities:

- a) Equity and Equity related instruments are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro-economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.
- b) The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.
- c) Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities.

c. Debt & money market securities investments under the scheme may also be subject to the following risks:

- a) Credit risk: Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations.
- b) Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.
- c) Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.
- d) Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
- e) Risk associated with unrated debt instruments – Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities such as credit risk, interest rate risk etc. However, investments in unrated instruments are subject to greater risk of loss of principal and interest than rated instruments.

d. Securitized debt investments under the scheme may also be subject to the following risks:

- a) Liquidity risk: There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.
- b) Limited Recourse: The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.
- c) Delinquency and Credit Risk: Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly investor pay-outs to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However, many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.
- d) Risks due to possible prepayments: Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.
 - Bankruptcy of the Originator or Seller: If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

e. Derivatives under the scheme may also be subject to the following risks:

- a) The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Investors should understand that derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include but are not limited to the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. There may be a cost attached to selling or buying futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares. The possible lack of a liquid secondary market for a futures contract or listed option may result in inability to close futures or listed option positions prior to their maturity date.
- b) Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.

c) No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

f. Repo in corporate debt may also be subject to the following risk:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non-guaranteed basis. Credit risks could arise if the counterparty does not return the security as contracted on due date. The liquidation of underlying bonds in case of counterparty default would depend on the liquidity of the bond and market conditions at that time. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also, operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme(s) being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme(s) may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

g. Stock lending may be subject to the following risk:

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. If the Scheme undertakes stock lending under the regulations, it may be exposed to the risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

h. Risks associated with Investing in ADR/GDR/Foreign Securities:

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in Foreign Securities including foreign equities. Such investments carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- It is the AMC's belief that investment in Foreign Securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme would invest only partially in Foreign Securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme.
- Overseas investments will be made subject to any/all approvals, conditions thereof as may be stipulated under the SEBI Regulations or by RBI and provided such investments do not result in expenses to the Scheme(s) in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing.
- To the extent that the assets of the Scheme will be invested in Foreign Securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

i. Risks associated with segregated portfolio:

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time there is recovery of money from the issuer.

2. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity, as there may not be active trading of units in the stock market. Further trading price of units on the stock market may be at a significant discount compared to the prevailing NAV.
3. Securities which are part of the segregated portfolio may or may not recover any money, either fully or partially.

j. Risk factors associated with investments in REITs AND InvITs:

Risk of lower than expected distributions: The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/INVIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate primarily based on the below, among other things:

- success and economic viability of tenants and off-takers
- economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
- force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- debt service requirements and other liabilities of the portfolio assets
- fluctuations in the working capital needs of the portfolio assets
- ability of portfolio assets to borrow funds and access capital markets
- changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
- amount and timing of capital expenditures on portfolio assets
- insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents
- taxation and other regulatory factors

Price-Risk: The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets.

Interest-Rate Risk: Generally, there would be an inverse relationship between the interest rates and the price of units. Generally, when the interest rates rise, prices of units fall and when interest rates drop, such prices increase.

Liquidity Risk: This refers to the ease with which REIT/InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists

k. Risk factors associated with imperfect hedge using Interest Rate Futures

1. The cost of hedge can be higher than adverse impact of market movements.
2. Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market. This may lead to the hedging position not giving the exact desired hedge result.
3. Derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
4. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities.

l. Risks associated with investing in ETFs:

ETFs are passively managed and may be affected by a general decline in the Indian markets relating to its Underlying Index. ETFs invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

- ETFs are listed on a stock exchange/s, however, there can be no assurance that an active secondary market will develop or be maintained.
- Investment in ETFs is subject to tracking error. Factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies may affect the

AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The AMC will endeavour to constantly minimize the tracking error and track the index as closely as possible.

m. Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities

Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

n. Risk factors associated with instruments having special features

- The scheme shall invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital. The instrument is also convertible to equity upon trigger of a pre-specified event for loss absorption as may be decided by the RBI.
- The debt instruments with special features are considered as Non-Convertible Debentures, may be treated as debt instruments until converted to equity.
- The instruments are subject to features that grants issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus debt instruments with special features are subject to "Coupon discretion", "Loss Absorbency", "Write down on Point of Non-viability trigger(PONV) event" and other events as more particularly described as per the term sheet of the underlying instruments.
- The instrument is also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

RISK CONTROL STRATEGIES:

Investments in Equity and equity related instruments including derivatives, debt securities and money market instruments carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification and hedging.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. To that extent the Volatility risk will be mitigated in the scheme.

Credit Risks

Credit risk shall be mitigated by investing in rated papers of the companies having the sound background, strong fundamentals, and quality of management and financial strength of the Company.

Further, the Investment Manager endeavours to invest in REITS/InvITs, where adequate due diligence and research has been performed by the Investment Manager. The Investment Manager also relies on its own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, etc

B. CREDIT EVALUATION POLICY & DUE DILIGENCE FOR CREDIT RISK

▪ CREDIT EVALUATION POLICY

Credit Analysis is a bottom up approach starting with looking at each individual issuer, industry, terms and covenants of a particular issue, etc. Individual issuer level exposures are taken only after approval from investment committee, i.e. issuer becoming part of "Accepted Credit Universe". A team of credit analyst will do a detailed analysis and prepare an initiation note to introduce an issuer to the universe.

For every issuer we focus on 4 Cs of credit

- Capacity
- Character
- Collateral
- Covenants

Key focus areas are

- Management Quality
- Financial Analysis
- Business Analysis
- Industry Analysis
- Regulatory Environment

- Feedback from Creditors
- Other Issues; auditor report and qualifications, etc

Regular management interaction at various levels, supported by plant visits, interaction with rating agencies is part of the process.

Once a credit limit is set, it is regularly monitored based on internal Tier classification.

▪ **DUE DILIGENCE FOR CREDIT RISK**

While carrying out due diligence for credit risk, following parameters/attributes are analysed:

The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the main portfolio (in % terms) during the period for which the segregated portfolio was in existence.

The legal charges related to recovery of the investments of the segregated portfolio may be charged to the segregated portfolio in proportion to the amount of recovery. However, the same shall be within the maximum TER limit as applicable to the main portfolio. The legal charges in excess of the TER limits, if any, shall be borne by SBIFML.

The costs related to segregated portfolio shall in no case be charged to the main portfolio.

Monitoring by Trustees

In order to ensure timely recovery of investments of the segregated portfolio, Trustees will ensure that, the SBIFML puts in sincere efforts to recover the investments of the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio. Further, an Action Taken Report (ATR) on the efforts made by the SBIFML to recover the investments of the segregated portfolio will be placed in every Trustee meeting till the investments are fully recovered/ written-off.

The Trustees will monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, trustees will ensure that there is a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

Creation of segregated portfolio will be optional and at the discretion of the AMC.

Illustration of impact of Portfolio Segregation on scheme and its investors:

Before Segregation:

Total Portfolio	Regular Plan	Direct Plan
Net Asset (a)	500	200
Units (b)	20.00	10.00
NAV per Unit (c = a/b)	25.00	20.00

Assumptions:

The above portfolio has a security XYZ with current market value on the date of segregation of Rs 70 which has been downgraded below investment grade or has defaulted. Post splitting the Total portfolio into Main portfolio and Segregated portfolio, the impact will be as below:

After Segregation:

Main Portfolio	Regular Plan	Direct Plan
Net assets before segregation (a)	500	200
Market Value of Security XYZ (b)	50.00	20.00
Net assets after segregation (c = a – b)	450.00	180.00
Units (d)	20.00	10.00
NAV per unit (c/d)	22.500	18.000

Net Assets* (a)	50.00	20.00
Units (b)	20.00	10.00
NAV per Unit (c = a/b)	2.50	2.00

(*equivalent of market value of segregated security)

For existing investors, the total portfolio will decline by the amount which is segregated (i.e. value of main portfolio after segregation). They will be allotted equal number of units in the main portfolio and the

segregated portfolio in the same proportion as held by them in the total portfolio. Thereafter, existing investors can redeem from the main portfolio based on the prevailing NAV and they will continue to hold units in the segregated portfolio. For any new investor, they will be allotted units only in the main portfolio based on the prevailing NAV. NAV of the segregated portfolio may undergo a change on the future depending on any recovery and any applicable haircut.

The Fund's trading in derivatives would be in line that is permitted by SEBI Regulations from time to time. The Fund may techniques that are permissible now or in future, under SEBI regulations, in consonance with the scheme's investment objective, including investment in derivatives such as interest rate swaps. The Fund shall fully cover its position in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market. The Fund shall maintain separate records for holding the cash and cash equivalents / securities for this purpose. The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all times.

SEBI in terms of paragraph 7.5 of the SEBI Master Circular for Mutual Funds dated May 19, 2023 permitted Mutual Funds to participate in the derivatives market at par with Foreign Portfolio Investors (FPI). Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts.

I. Position Limit

The position limits for the Mutual Fund and its schemes, for transaction in derivatives segment are in compliance to the paragraph 7.5 of the SEBI Master Circular for Mutual Funds dated May 19, 2023, and to all such amendments as applicable from time to time. The position limits are given as under:

i. Position limit for the Mutual Fund in index options contracts

The Mutual Fund position limits in index option contracts on a particular underlying index shall be higher of:

- a. Rs. 500 Crore; or
- b. 15% of the total open interest in the market in index options contracts.

This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for the Mutual Fund in index futures contracts:

The Mutual Fund position limits in index futures contracts **on a particular underlying index shall be higher of:**

- a. Rs. 500 Crore; or
 - b. 15% of the total open interest in the market in index futures contracts.
- This limit would be applicable on open positions in all futures contracts on a particular underlying index.

iv. Position limit for Mutual Funds for stock based derivative contracts

The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL) (as per paragraph 7.5.1.4 of the SEBI Master Circular for Mutual Funds dated May 19, 2023).

v. Position limit for each scheme of a Mutual Fund

The scheme-wise position limit / disclosure requirements shall be –

1. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of:

1% of the free float market capitalization (in terms of number of shares).

Or

5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

2. This position limits shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.

For the time duration of change in the index constituents, the Scheme may invest in Derivatives to maintain the respective weightages for the stocks, constituting the underlying index.

1. For index based contracts, Mutual Funds shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

For the time duration of change in the index constituents, the Scheme may invest in Derivatives to maintain the respective weightages for the stocks, constituting the underlying index.

Index Futures / Stock Futures – buying index futures / stock futures (long position) can provide exposure to the index or the stock without undertaking any position in the underlying stocks. Thus, any market movement can be effectively captured by the scheme through such exposure. This can be useful at the time of any portfolio rebalancing due to index rebalancing and may help the scheme in managing its tracking error and the impact cost more efficiently. On the other hand, the scheme can also sell index futures / stock futures (short position). Thus, any long or short position in an outgoing or incoming stock in the index can be efficiently managed by suitable exposure through derivatives.

Illustration

Spot price for stock A: Rs 650

Near month Stock Future price at the beginning of the month: Rs 653

Scheme buys 1000 lots

Each lot has a nominal value equivalent to 200 units of the underlying stock

Let us assume on the date of unwinding the position, the future price is trading at Rs 660 and the spot price is trading at Rs 657

Profits for the Scheme = $(660-653) * 1000 \text{ lots} * 200 = \text{Rs } 1,400,000$

In effect in the above example, the scheme can replicate the movement of the underlying stock through derivatives. The above is for illustration purpose only and any associated cost like brokerage, transaction cost, margin etc will have to be accounted for.

Debt Derivatives

The Scheme may use derivatives instruments like Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing and as may be permitted under the Regulations and guidelines.

1. Interest Rate Swaps

Interest rate swap is a strategy in which one party exchanges a stream of interest for another party's stream. Interest rate swaps are normally 'fixed against floating' but can also be 'fixed against fixed' or 'floating against floating' rate swaps. Interest rate swaps will be used to take advantage of interest-rate fluctuations, by swapping fixed-rate obligations for floating rate obligations or swapping floating rate obligations to fixed-rate obligations. A floating-to-fixed swap increases the certainty of an issuer's future obligations. Swapping from fixed-to-floating rate may save the issuer money if interest rates decline. Swapping allows issuers to revise their debt profile to take advantage of current or expected future market conditions.

2. Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Advantages of Derivatives

The volatility in Indian debt markets has increased over last few months. Derivatives provide unique flexibility to the Scheme to hedge part of their portfolio. Some of the advantages of specific derivatives are as under:

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rates by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

Illustration: Interest Rate Swap (IRS)

Assume that a Mutual Fund has INR 10 crore, which is to be deployed in overnight products for 7 days. This money will be exposed to interest rate risk on daily basis. The fund can buy an Interest Rate Swap receiving fixed interest rate and paying NSE MIBOR.

The deal will be as under:

The cash flows on a notional principal amount of Rs. 10 crores would be-

(Rs. in Crore)

	Principal	NSE MIBOR	Interest	Amount	
Day 1		10.0000	8.10%	.0022192	10.00221918
Day 2		10.00222	8.20%	.0022466	10.00446575
Day 3		10.00447	8.30%	.002274	10.00673973
Day 4 (for 2 days)	Saturday	10.00674	8.15%	.0044658	10.01120548
Day 5	Sunday		Holiday		
Day 6		10.01121	8.40%	.0023014	10.01350685

Day 7		10.01351	8.50%	.0023288	10.01583562
Floating Interest Payable					.0158356164
Fixed Interest Receivable					.0167808219
Net Receivable for Mutual Fund receiving fixed					.0009452055

In this example, Mutual Fund stands to gain by receiving fixed rates. As the NSE MIBOR floating rate is decided daily, in adverse scenario, the Mutual Fund may have to pay the difference.

The counter-party providing Swap, Options, Forward Rate Agreements (FRAs) will do the same at a cost.

Risk factors Interest rate swaps strategy:

Risk Factor: The risk arising out of uses of the above derivative strategy as under:

- Lack of opportunities available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Interest rate swaps require the maintenance of adequate controls to monitor the transactions entered into, the ability to forecast failure of another party (usually referred to as the 'counter party') to comply with the terms of the derivatives contract.

Risk factors associated with imperfect hedge using Interest Rate Futures

1. The cost of hedge can be higher than adverse impact of market movements
2. Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market. This may lead to the hedging position not giving the exact desired hedge result.
3. Derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
4. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities.

ILLUSTRATION FOR IMPERFECT HEDGE ON INTEREST RATE FUTURES

Security	Market Value (in Cr.)	Weight in the Portfolio	Yield (%)	Modified Duration	Weighted Modified Duration
GOI 7.35% 22.06.2024	50.00	10.64%	7.05	5.00	0.53
GOI 6.79% 15.05.2027	400.00	85.11%	7.03	6.85	5.83
GOI 6.68% 17/09/2031	20.00	4.26%	7.08	8.71	0.37
	470				
679GS2027 IRF	100.99				

Consider a hypothetical portfolio or a part of a larger portfolio composed of 3 different securities with a Portfolio Average Modified Duration of 6.74. On account of change in economic factors, it is expected that the interest rates could go up by 1% over the coming days. The portfolio would look to hedge the impact on this portfolio through selling IRF, of which the underlying security is different as given. This would be an example of imperfect hedge where the portfolio that is hedged and the instrument underlying the futures contract are different.

The maximum number of contracts in IRF to sold is given by the following formula = (Market Value portfolio * Modified Duration of portfolio) / (Market Value of 1 Futures contract * Modified Duration of futures)

Market Value Portfolio * Modified Duration Portfolio	31,654,557,509.18
--	-------------------

Market Value of 1 Futures Contract	201,985.00
No of contracts to be sold	23,183.04
Market Value of Futures (in Cr.)	468.26
Negative Impact on Portfolio (in Cr.)	-31.65
Positive Gain on Futures (in Cr.)	31.65

The impact on portfolio due to a 1% rise in yields is approx Rs. 31.65 crs. Since the portfolio has sold IRF contracts, the gain on account of the same is around Rs. 31.65 crs. Accordingly, the loss on the underlying portfolio is hedged through IRF even as the underlying securities are different. The scheme would pursue imperfect hedging to the extent permitted by extant SEBI guidelines

COVERED CALL STRATEGY

Risks associated with writing covered call options for equity shares:

In addition to the risks associated with derivative instruments, listed below are the risks associated with writing covered call options.

- **Market Risk:**

Appreciation in the underlying equity shares could lead to loss of opportunity in case of writing of covered call option. In case if the appreciation in equity share price is more than the option premium received, the appreciation in the scheme would be capped.

- **Liquidity Risk:**

This strategy of writing covered call in a scheme will be used, provided the scheme has adequate number of underlying equity shares as per regulatory requirement. Subsequently, the scheme will have to set aside a portion of investment in the underlying equity shares. Further, in case the covered call options are sold to the maximum extent as allowed under the purview of regulations, the scheme would be unable to sell the shares of the respective stock, to the extent that would be blocked under the covered call. Hence, if the call option contracts which have been written become illiquid, it may lead to a loss of opportunity or can cause exit issues.

As a result, it may happen that the scheme is not able to sell the underlying equity shares immediately, which can lead to temporary illiquidity of the underlying equity shares and may result in loss of opportunity.

Covered call strategy

The scheme may write call options only under a covered call strategy for constituent stocks of NIFTY 50 and BSE SENSEX, and any other stock as and when allowed by SEBI, subject to the following:

- a) The total notional value (taking into account strike price as well as premium value) of call options written by a scheme shall not exceed 15% of the total market value of equity shares held in that scheme.
- b) The total number of shares underlying the call options written shall not exceed 30% of the unencumbered shares of a particular company held in the scheme. The unencumbered shares in a scheme shall mean shares that are not part of Securities Lending and Borrowing Mechanism (SLBM), margin or any other kind of encumbrances.
- c) At all points of time the Mutual Fund scheme shall comply with the provisions at paragraph (a) and (b) above. In case of any passive breach of the requirement at paragraph (a), the respective scheme shall have 7 trading days to rebalance the portfolio. During the rebalancing period, no additional call options can be written in the said scheme.
- d) In case a Mutual Fund scheme needs to sell securities on which a call option is written under a covered call strategy, it must ensure compliance with paragraphs (a) and (b) above while selling the securities.
- e) In no case, a scheme shall write a call option without holding the underlying equity shares. A call option can be written only on shares which are not hedged using other derivative contracts.
- f) The premium received shall be within the requirements prescribed in terms of paragraph 12.25.8 (i) (f) of Master Circular for Mutual Funds i.e. the total gross exposure related to option premium paid and received must not exceed 20% of the net assets of the scheme.

- g) The exposure on account of the call option written under the covered call strategy shall not be considered as exposure in terms of paragraph 12.25.8 (i) (g) of Master Circular for Mutual Funds.
- h) The call option written shall be marked to market daily and the respective gains or losses factored into the daily NAV of the respective scheme(s) until the position is closed or expired.

Benefits of using Covered Call strategy in Mutual Funds:

The covered call strategy can help in earning income and hedging risk and subsequently result in better risk adjusted returns for the Scheme. Following are the benefits offered by this strategy:

- a. Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b. Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Example of Covered Call

Illustrations:

Buy 100 stocks of Company A at Rs 1000 and write (sell) call options of the company A for the same month, with a strike price of Rs 1050. Assume the said option is trading at Rs 10. Thus, the total premium received for selling the call option is Rs 1000 (Rs 10*100 lot size).

On the day of expiration of options contract:

Scenario 1: markets goes up and the stock price of company A goes upto Rs 1030

- a) Gain on stock is Rs 3000.
- b) The call option will expire worthless (strike price is Rs 1050 and underlying price is Rs 1030). Thus, as a writer (seller) of call option, we can keep the premium of Rs 1000.
- c) Thus, net gain is Rs 4000 (Rs 3000 on underlying stock and Rs 1000 premium collected)

Scenario 2: markets goes up and the stock price of company A goes upto Rs 1100

- a) Gain on stock is Rs 10000
- b) The call option is in the money by Rs 50 (strike price is Rs 1050 and underlying price is Rs 1100). Thus, as a writer (seller) of call option we must pay Rs 5000 to option buyer (Rs 50) and we would receive option premium of Rs. 1000 (Rs. 10*100), thus, the total loss would be Rs. 4000 (Rs. 5000 – Rs. 1000 received as the option premium).
- c) Thus, net gain is Rs 6000 (Rs 10000 on underlying stock and Rs 4000 loss on option position)

Scenario 3: markets goes down and the stock price of company A goes down to Rs 950

- a) Loss on stock is Rs 5000
- b) The call option will expire worthless (strike price is Rs 1050 and underlying price is Rs 950). Thus, as a writer (seller) of call option, we can keep the premium of Rs 1000.
- c) Thus, net loss is Rs 4000 (Rs 5000 on underlying stock and Rs 1000 premium collected)

Further the exposure limits for trading in derivatives by Mutual Funds specified by paragraph 12.24 and paragraph 12.25 of SEBI Master Circulars for Mutual Funds dated May 19, 2023 are as follows:

1. The cumulative gross exposure through equity, debt, derivative positions (including fixed income derivatives), repo transactions in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs) other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.

4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

Definition of Exposure in case of Derivative Positions

5. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts

II. The risks involved in derivatives are:

1. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
2. An exposure to derivatives can also limit the profits from a genuine investment transaction.
3. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
4. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

III. Methods to tackle these risks:

1. Limits of appropriate nature will be developed for counter parties
2. Such an exposure will be backed by assets in the form of cash or securities adequate to meet cost of derivative trading and loss, if any, due to unfavorable movements in the market.

IV. The losses that may be suffered by the investors as a consequence of such investments:

2. As the use of derivatives is based on the judgment of the Fund Manger, the view on market taken may prove wrong resulting in losses.

VI. VALUATION OF DERIVATIVES

- i. The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the SEBI Regulations.
- ii. The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the SEBI Regulations.

VII. REPORTING OF DERIVATIVES

The AMC shall cover the following aspects in their reports to trustees periodically, as provided for in the Regulations:

- i. Transactions in derivatives, both in volume and value terms.
- ii. Market value of cash or cash equivalents / securities held to cover the exposure.

- iii. Any breach of the exposure limit laid down in the scheme Information document.
- iv. Shortfall, if any, in the assets covering investment in derivative products and the manner of bridging it.

The Trustees shall offer their comments on the above aspects in the report filed with SEBI under sub regulation (23) (a) of regulation 18 of SEBI Regulations.

G. DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks), Treasury Bills (issued by RBI) and the triparty repo.

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the G-sec markets and the overnight repo and triparty repo are guaranteed and done by a central counterparty, the Clearing Corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on September 30, 2023:

Instruments	Indicative yield range
Overnight rates	6.75 - 6.80
90 day Commercial Paper	7.00 - 7.05
91-day T-bill	6.80 – 6.85
1 year G-Sec	7.00 – 7.05
5 year G – Sec	7.20-7.25
10 year G-Sec	7.23 7.27
1 year AAA Bond	7.40 - 7.45
5 year AAA Bond	7.65 – 7.70

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally, when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to

that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.

G. Portfolio turnover

The Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time. The Asset Management Company does not have a policy statement on portfolio turnover. Generally, the Asset Management Company's portfolio management style is conducive to a low portfolio turnover rate. However, given the nature of the Scheme which follows a monthly cycle or rollover / positions the portfolio turnover is expected to be high. Further, there are trading opportunities that present themselves from time to time. These trading opportunities may be due to trading opportunities in equities, changes in interest rate policy by the Reserve Bank of India, shifts in the yield curve, credit rating changes or any other factors where in the opinion of the fund manager there is an opportunity to enhance the total return of the portfolio. It will be the endeavour of the fund manager to keep portfolio turnover rates as low as possible.

Portfolio Turnover Ratio (as on September 30, 2023): 3.62

M. DISCLOSURES PERTAINING TO SECURITIZED DEBT

Risk profile of securitized debt vis-a-vis risk appetite of the scheme

The risk of investing in securitized debt is similar to investing in debt securities. However, it differs from other debt securities in two ways:

- **Liquidity:** Typically, the liquidity of securitized debt is less than similar debt securities.
- **Pre-payment:** For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Policy relating to originators:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, SBI MF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:

- Outlook for the economy (domestic and global)

- Outlook for the industry
- Originator/Pool specific factors

For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments

Risk mitigation strategies:

Risk mitigation strategies will depend on each asset class, whether they are unsecured loans or secured, seasoning, collection history, past recovery rates, originator's financial profile, servicing performance, etc. for each asset class. SBI MF will invest in pools with investment grade rating by SEBI recognised rating agencies. In addition, some specific risk mitigation measures will include

Risk	Mitigants
Credit Risk	Analysis of originator with respect to past track record, systems and processes, performance of pools, collateral adequacy and disclosure frequency; Analysis of specific pool with respect to nature of underlying asset, seasoning, loan sizes, loan to value ratio, geographical diversity, etc
Counterparty Risk	Past track record of handling securitized transactions, disclosure adequacy and frequency
Legal Risk	Check with rating agency that investors' interest is not compromised, specific protection measures like bankruptcy remoteness, etc are built in Separate in-house legal opinion on transactions,
Market Risk	Liquidity, Prepayment and Interest Rate Risk Analysis and level of their mitigation through transaction structure and credit enhancements provided

The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	60-120 months	12-48 months	12-48 months	12-24 months	12 months	12-36 months	NA	NA
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA
Average Loan to Value Ratio	Less than 90%	Less than 90%	Less than 90%	Less than 90%	NA	NA	NA	NA
Average seasoning of the Pool	6-12 months	3-6 months	3-6 months	3-6 months	3-12 weeks	1-3 months	0-3 months	NA
Maximum single exposure range	3-4%	3-4%	Retail	Retail	Retail	Retail	NA	NA
Average single exposure range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors. The investment

committee will review the above guidelines considering the extant RBI guidelines pertaining to securitization.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- ⇒ Average original maturity of the pool: based on different asset classes and current market practices
- ⇒ Collateral margin including cash collateral and other credit enhancements
- ⇒ Loan to Value Ratio
- ⇒ Average seasoning of the pool, which is a key indicator of past pool performance
- ⇒ Default rate distribution
- ⇒ Geographical Distribution
- ⇒ Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc.) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency

Minimum retention period of the debt by originator prior to securitization:

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

Minimum retention percentage by originator of debts to be securitized

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the Scheme in any asset are done based on the requirements of the Scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest.

The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

As with any other debt instruments, investment in securitized debt instruments will be closely monitored by a dedicated team of credit analysts, ratings of any such instruments will be continuously tracked and periodic performance report from Trustee and MIS from Originators, if any would be scrutinized closely.

PROCEDURES FOLLOWED FOR INVESTMENT DECISIONS

The process of approval of transactions is done by the investment team comprising of Chief Investment Officer (CIO), Vice President (Investment Risk & Process Control) and all Fund Managers. The committee also invites the Compliance Officer and Head of Research in its meetings. The investment committee holds periodic meetings for a detailed review of investment strategy, portfolio holdings, review of research and dealing activities, analysis of scheme performances and also to ensure adherence to all internal guidelines and processes. The Investment Committee monitors and supervises the investment decisions made by the Investment team and also monitors the risk parameters in each scheme to ensure that the investment limits are properly observed. The risk origination for the investments is done based on the guidelines issued by SEBI and Board of Trustees. Concurrent auditors periodically check the limits and their reports are placed before the Audit Committee, which is comprised of the independent Directors and Trustees. The monitoring of decisions is taken through quarterly secondary and primary market

report to the Directors. All the deals, both primary and secondary market are reported periodically to the investment committee and the Board of Trustees.

O. How this scheme is different from the existing schemes of SBI Mutual Fund:

The scheme endeavours to provide long term capital appreciation/income from a mix of equity and debt investments. The objective of the scheme is to provide long term capital appreciation / income from a dynamic mix of equity and debt investments. However, there can be no assurance that the investment objective of the Scheme will be realized.

Following is the investment objectives / strategies/ asset allocation of various hybrid schemes presently being managed by SBI Mutual Fund:

to the value of his investments on the date of transfer at pre-determined intervals from designated open-ended scheme (source scheme) to the Growth option of another open-ended scheme (target scheme).

Terms and conditions of Flex STP are as follows:

- The amount to be transferred under Flex STP from source scheme to target scheme shall be calculated using the below formula:

Swing STP

Swing STP is a facility wherein investor can opt to transfer an amount at regular intervals from source scheme of SBI Mutual Fund (SBIMF) to a target scheme of SBIMF including a feature of reverse transfer from target scheme into the source scheme, in order to achieve the targeted market value on each transfer date in the target scheme. This ensures that the market value on each date of the transfer rises by a specified amount at every frequency irrespective of the market price. For example if investor decides that the value of their investment in the target scheme should appreciate by Rs. 1000 per month, then each month investor will invest only to the extent of the shortfall. If appreciation in the target scheme is higher than the target value then this excess value is reverse transferred to the source scheme. Thus the amount to be transferred will be arrived at on the basis of the difference between the target market value and the actual market value of the holdings in the target scheme on the date of transfer.

Terms & conditions of Swing STP are as follows:

- Source scheme: All open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.
- Target scheme: Growth option in all open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.
- Frequency: Weekly, Monthly and Quarterly intervals. In case the Frequency is not indicated, Monthly frequency shall be treated as the Default Frequency.
- Dates: The dates of transfers/ default dates shall be as under:

Frequency	Dates of Transfers	Default Date
Weekly Interval	1 st , 8 th , 15 th & 22 nd of every month	-
Monthly Interval	1 st , 5 th , 10 th , 15 th , 20 th , 25 th & 30 th In case of February last working day)	10th of every month
Quarterly Interval	1 st , 5 th , 10 th , 15 th , 20 th , 25 th & 30 th (In case of February last working day) The beginning of the quarter could be any month e.g. January, May, November, etc.	10th of every quarter

In case the date of transfer falls on a non-Business Day, the immediate next Business day will be considered for the purpose of determining the applicability of NAV and processing the transaction.

- The minimum amount for the first installment shall be as follows:
 - Weekly & Monthly frequency: Rs. 1,000 and in multiples of Re. 1
 - Quarterly frequency: Rs. 3,000 and in multiples of Re. 1
- Minimum number of installments
 - Weekly & Monthly frequency: 12
 - Quarterly frequency: 4
- If there is any other financial transaction (purchase / redemption / switch / SIP / DTP etc.) processed in the target scheme/plan/option during the tenure of Swing STP, the Swing STP will be processed as normal STP for the rest of the installments for the fixed amount.
- Amount of transfer: The first Swing STP installment will be processed for the installment amount specified by the investor at the time of enrollment. From the second Swing STP installment onwards, the transfer amount will be derived by the following formula:

(First installment amount X Number of installments including the current installment) – Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer.

In case on the STP date, the amount (as specified above) to be transferred is not available in the source scheme/plan/option in the investor's folio, the residual amount will be transferred to the target scheme/plan/option and Swing STP will be closed. Investors have an option to consider earlier investments in the target scheme for calculating Swing STP amount.

- Reverse Transfer: On the date of transfer, if the market value of the investments in the target scheme/plan/option through Swing STP is higher than the target market value (first installment amount X number of installments including the current installment), then a

reverse transfer will be effected from the target scheme/plan/option to the source scheme/plan/option to the extent of the difference in the amount, in order to arrive at the target market value.

- **Top-up option:** Investor can choose Swing STP based on fixed amount installment and additionally investor has an option to choose top-up option. Under this, investor can indicate an absolute amount or percentage (in annualized terms) by which each installment amount will be increased. Amount of transfer will be calculated by taking into consideration of the target market value (including top-up amount) and actual market value of the investments in the target scheme.
 - Amount of transfer: The first Swing STP installment will be processed for the first installment amount specified by the investor at the time of enrollment. From the second Swing STP installment onwards, the transfer amount will be derived by the following formula:

In case Top-up amount mentioned as absolute amount:

Target market value Minus Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer.

Target market value = (Target market value at the time of last installment + First installment amount + (Top-up absolute amount X Number of installments excluding the current installment)).

Minimum amount for Top-up (absolute amount):

- Weekly & Monthly frequency: Rs. 50 per installment and in multiples of Re. 1
- Quarterly frequency: Rs. 100 per installment and in multiples of Re. 1

No. of periods will be considered as below:

- For weekly frequency – 48
- For monthly frequency – 12

- A single STP enrolment Form can be submitted for transfer into one Scheme/Plan/Option only.

- The application for enrollment / termination for Swing STP should be submitted at least 10 days before the desired commencement / termination date.
- In case the Start Date is not mentioned, the application will be registered after expiry of 10 days from submission of the application as per the default date i.e. 10th of each month / quarter (or the immediately succeeding Business Day). In case the End Date is not

- mentioned, the application will be registered for perpetual period.
- Load structure prevalent in source & target schemes (for reverse transfer) at the time of Swing STP registration will be applicable during the tenure of the Swing STP.
- Swing STP will be automatically terminated if balance is not available in the source scheme/plan/option on the date of Swing STP installment processing.
- The Swing STP Facility is available only for units held in Non - demat Mode in the source and target schemes.

D. NAV INFORMATION

NAV of the Scheme shall be computed and declared on every business day. The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto four decimal places as follows or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

NAV will be disclosed as prescribed under SEBI (Mutual Funds) Regulations, 1996. NAV can also be viewed on www.sbimf.com and www.amfiindia.com.

The AMC shall update the NAVs on the website of Association of Mutual Funds in India - AMFI (www.amfiindia.com) by 11.00 p.m. on business day basis. In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

Whenever the Scheme also invests in foreign securities, the NAVs of Scheme shall be updated on daily basis on the website of the AMC and on the website of AMFI by 10:00 a.m. of the following business day in line with Paragraph 8.2 of Master Circular for mutual funds.

In case of non-availability of price/valuation for the underlying overseas investments before aforementioned timeline, consequent to which there would be inability in capturing same day price/valuation for such underlying investments, then NAV of the Scheme will be declared as and when the price/valuation for such underlying securities/ Funds is available.

Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV

E. Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2021 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2021, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

$$\text{Redemption Price} = \text{Applicable NAV} * (1 - \text{Exit Load})$$

Say, in the above example the exit load applicable is:

- a. For exit on or before 12 months from the date of allotment – 1.00%
- b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2022; say December 1, 2021, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned} \text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 1\%) = \text{Rs. } 11.988/- \end{aligned}$$

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2022; say April 1, 2022, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned} \text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 0) = \text{Rs. } 12/- \end{aligned}$$

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to paragraph 8.1.5 of the SEBI Master Circular for mutual funds dated May 19, 2023.
