I. INTRODUCTION

A. RISK FACTORS

1. Standard Risk Factors

- a. Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the Fund's objective will be achieved.
- b. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
- c. Past performance of the Sponsor / AMC / Mutual Fund or its affiliates does not guarantee the future performance of the scheme of the Mutual Fund.
- d. State Bank of India, the sponsor, is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution made by it of an amount of Rs. 5 lakhs towards setting up of the mutual fund.
- e. SBI Fixed Maturity Plan (FMP) - Series 92 (91 Days) (the Scheme) is only the name of the Scheme and does not, in any manner, indicate either the quality of the Scheme or its future prospects and returns.
- f. The NAV of the Schemes' Units may be affected by change in the general market conditions, factors and forces affecting capital markets in particular, level of interest rates, various market related factors and trading volumes.
- g. The present scheme is not a guaranteed or assured return scheme.
- h. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.

2. Scheme-specific Risk Factors

- a. The Scheme will be investing in debt instruments, Government Securities and money market instruments (such as term/notice money market, repos and reverse repos). Trading volumes and settlement periods inherently restrict the liquidity of the scheme's investments. In the event of a restructuring of the scheme's investment portfolio, these periods may become significant.
- b. Different types of securities in which the scheme would invest as given in the SID carry different levels of risk. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- c. Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities

Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

d. Debt & money market instruments investments under the scheme may also be subject to the following risks:

- I. Credit risk: Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations.
- II. Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.
- III. Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/ depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.
- IV. Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.

e. **Risks associated with Investing in Derivatives**

- i. The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Investors should understand that derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with underlying instruments. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include but are not limited to the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. There may be a cost attached to selling or buying futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares. The possible lack of a liquid secondary market for a futures contract or listed option may result in inability to close futures or listed option positions prior to their maturity date.
- ii. Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss.
- iii. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the

fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

- iv. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- v. The fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other fixed income derivatives.
- vi. Credit Risk: The credit risk in a derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- vii. Market risk: Derivatives carry the risk of adverse changes in the market price.
- viii. Illiquidity risk: The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.
- ix. Floating Leg Risk: The fund pays the daily compounded rate. In practice, however there can be a difference in the actual rate at which money is lent in the call market and the benchmark, which appears and is used

It may be mentioned here that the guidelines issued by Reserve Bank of India from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to.

f. **Securitized debt investments under the scheme may also be subject to the following risks:**

- **Liquidity risk:** There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.
- **Limited Recourse:** The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.
- **Delinquency and Credit Risk:** Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly Investor Payouts to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However, many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.
- **Risks due to possible prepayments:** Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.
- **Bankruptcy of the Originator or Seller:** If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

g. **Risk associated with Close Ended Scheme**

In a close ended scheme, redemption / repurchase shall not be allowed prior to maturity of the Scheme. Scheme will mature at the end of the close ended period. For liquidity purpose units of the scheme are to be listed on Stock Exchange. Investors who wish to trade on the exchange and investors wishing to

exit / redeem before the scheduled maturity may do so through stock exchange mode where the scheme will be listed. For the units listed on the exchange it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units and investor may not get the desired return. Also there may not be sufficient liquidity on the stock exchange for the investors to exit from the stock exchange mode.

h. Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non guaranteed basis. Credit risks would arise if the counter party fails to repurchase the security as contracted. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

i. Risks associated with segregated portfolio

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

1. Investor holding units of segregated portfolio may not able to liquidate their holding till the time there is recovery of money from the issuer.
2. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity, as there may not be active trading of units in the stock market. Further trading price of units on the stock market may be at a significant discount compared to the prevailing NAV.
3. Securities which are part of the segregated portfolio may or may not recover any money, either fully or partially.

B. Risk Control strategies:

Investments in debt and money market securities carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk. Additionally, the fund will invest in securities maturing on or before the maturity of the fund. Hence, while the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. Further, the Scheme will invest in a basket of debt and money market securities maturing on or before maturity of the Scheme with a view to hold them till the maturity of the Scheme. To that extent the Volatility risk will be mitigated in the scheme.

Credit Risks

Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.

C. CREDIT EVALUATION POLICY & DUE DILIGENCE FOR CREDIT RISK

• CREDIT EVALUATION POLICY

Credit Analysis is a bottom up approach starting with looking at each individual issuer, industry, terms and covenants of a particular issue, etc. Individual issuer level exposures are taken only after approval from investment committee, i.e. issuer becoming part of "Accepted Credit Universe". A team of credit analyst will do a detailed analysis and prepare an initiation note to introduce an issuer to the universe.

For every issuer we focus on 4 Cs of credit

- Capacity – Measures a borrower's ability to repay a loan by comparing income against recurring debts
- Character - Refers to a borrower's reputation
- Collateral – Assets to secure the debt
- Covenants – Terms and Conditions of the load itself.

Key focus areas are

- Management Quality
- Financial Analysis
- Business Analysis
- Industry Analysis
- Regulatory Environment
- Feedback from Creditors
- Other Issues; auditor report and qualifications, etc.

Regular management interaction at various levels, supported by plant visits, interaction with rating agencies is part of the process.

Once a credit limit is set, it is regularly monitored based on internal Tier classification.

• DUE DILIGENCE FOR CREDIT RISK

While carrying out due diligence for credit risk, following parameters/attributes are analysed:

- **Management Quality** – It includes assessment of management quality, reviewing promoter background and track record, performance of group companies and possibility of group support, internal control systems, succession plans & repayment track record including that of other companies in the group.

- **Financial Analysis** – It includes analysis of Balance sheet, Profit and Loss account, and cash flow statement. Ratio analysis for the past years including quarterly/half yearly results analysis wherever available. Different set of ratios are analysed for corporates, banks, NBFCs etc.
- **Business Analysis** – It includes understanding of competitive position and competitor analysis on key parameters, strategies for growth, technical and marketing skill set, manufacturing process, productivity details and future expansion plans.

Further, an Action Taken Report (ATR) on the efforts made by the SBIFML to recover the investments of the segregated portfolio will be placed in every Trustee meeting till the investments are fully recovered/ written-off.

The Trustees will monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, trustees will ensure that there is a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

Creation of segregated portfolio will be optional and at the discretion of the AMC.

Illustration of impact of Portfolio Segregation on scheme and its investors:

Before Segregation:

Net Asset (a)	500	200

NAV per Unit (c = a/b)	25.00	20.00

Assumptions:

The above portfolio has a security XYZ with current market value on the date of segregation of Rs 70 which has been downgraded below investment grade or has defaulted. Post splitting the Total portfolio into Main portfolio and Segregated portfolio, the impact be as below:

After Segregation:

Main Portfolio	Regular Plan	Direct Plan
Net assets before segregation (a)	500	200
Market Value of Security XYZ (b)	50.00	20.00
Net assets after segregation (c = a – b)	450.00	180.00
Units (d)	20.00	10.00
NAV per unit (c/d)	22.500	18.000

NAV per Unit (c = a/b)	2.50	2.00

(*equivalent of market value of segregated security)

For existing investors, the total portfolio will decline by the amount which is segregated (i.e. value of main portfolio after segregation). They will be allotted equal number of units in the main portfolio and the segregated portfolio in the same proportion as held by them in the total portfolio. Thereafter, existing investors can redeem from the main based on the prevailing NAV and they will continue to hold units in the segregated portfolio. For any new investor, they will be allotted units only in the main portfolio based on the prevailing NAV. NAV of the segregated portfolio may undergo a change on the future depending on any recovery and any applicable haircut.

G. INVESTMENT STRATEGIES

The Scheme is an actively managed Close-ended Debt Scheme and the objective is to provide regular income and capital growth with limited interest rate risk to the investors through investments in a portfolio comprising of mix of fixed income securities maturing on or before the maturity of the scheme.

Investments under the Scheme would be made only in securities which mature on or before the date of the maturity of the Scheme. The scheme has the flexibility to invest in the entire range of debt instruments and would seek to minimise interest rate risk while avoiding credit risks. The issuer selection for credit exposure would be based on financial parameters such as Turnover, Net Worth, Gearing, Interest Coverage Ratio and Profitability track record. Companies in the investment universe are initially screened on the basis of Management quality, Business and Industry analysis & Feedback from creditors/ Rating agencies. Companies which meet the initial screening norms are then evaluated on the financial norms for consideration in the investment. The scheme would make investment in securities in the investment universe based on market spreads and liquidity, so as to match the investment horizon with the scheme maturity. Investment in sovereign papers would be based on interest rate expectations arising out of macroeconomic analysis. This includes analysis of inflation data and trends in macro variables such as credit growth, liquidity, money supply growth, fiscal numbers and the global interest environment.

Features differentiating among different series of the Scheme are as follows:

Liquidity: In normal market situation, short term papers have very high liquidity compared to long term papers.

Yield to Maturity: In normal market conditions, the yield of the portfolio constructed with shorter term papers will be lower than longer term papers.

Yield Curve: Yield to maturity for certain term to maturities may be higher or lower depending upon the prevalent market conditions.

Purchasing Power: The relative activeness of the Scheme will also change with the inflation expectations for the term to maturity of that Scheme.

Credit Quality: The credit quality of debt instruments vary under changing market conditions and firm specific growth and stability factors. The Scheme launched at different times may bear different credit risk and hence generate unequal returns.

L. PAST PERFORMANCE OF THE SCHEME

This scheme is a new scheme and does not have any performance track record.

M. DISCLOSURES PERTAINING TO SECURITIZED DEBT

Risk profile of securitized debt vis-a-vis risk appetite of the scheme

The risk of investing in securitized debt is similar to investing in debt securities. However, it differs from other debt securities in two ways:

- **Liquidity:** Typically, the liquidity of securitized debt is less than similar debt securities.
- **Pre-payment:** For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Policy relating to originators:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, SBI MF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Originator/Pool specific factors

For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments

Risk mitigation strategies:

Risk mitigation strategies will depend on each asset class, whether they are unsecured loans or secured, seasoning, collection history, past recovery rates, originator's financial profile, servicing performance, etc. for each asset class. SBI MF will invest in pools with investment grade rating by SEBI recognised rating agencies. In addition, some specific risk mitigation measures will include

Risk	Mitigants
Credit Risk	Analysis of originator with respect to past track record, systems and processes, performance of pools, collateral adequacy and disclosure frequency; Analysis of specific pool with respect to nature of underlying asset, seasoning, loan sizes, loan to vale ratio, geographical diversity, etc
Counterparty Risk	Past track record of handling securitized transactions, disclosure adequacy and frequency
Legal Risk	Check with rating agency that investors' interest is not compromised, specific protection measures like bankruptcy remoteness, etc are built in Separate in-house legal opinion on transactions,
Market Risk	Liquidity, Prepayment and Interest Rate Risk Analysis and level of their mitigation through transaction structure and credit enhancements provided

The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	60-120 months	12-48 months	12-48 months	12-24 months	12 months	12-36 months	NA	NA
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA
Average Loan to Value Ratio	Less than 90%	Less than 90%	Less than 90%	Less than 90%	NA	NA	NA	NA
Average seasoning of the Pool	6-12 months	3-6 months	3-6 months	3-6 months	3-12 weeks	1-3 months	0-3 months	NA
Maximum single exposure range	3-4%	3-4%	Retail	Retail	Retail	Retail	NA	NA
Average single exposure range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors. The investment committee will review the above guidelines considering the extant RBI guidelines pertaining to securitization.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- ⇒ Average original maturity of the pool: based on different asset classes and current market practices
- ⇒ Collateral margin including cash collateral and other credit enhancements
- ⇒ Loan to Value Ratio
- ⇒ Average seasoning of the pool, which is a key indicator of past pool performance
- ⇒ Default rate distribution
- ⇒ Geographical Distribution
- ⇒ Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc.) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency

Minimum retention period of the debt by originator prior to securitization:

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

Minimum retention percentage by originator of debts to be securitized

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the Scheme in any asset are done based on the requirements of the Scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest.

The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

As with any other debt instruments, investment in securitized debt instruments will be closely monitored by a dedicated team of credit analysts, ratings of any such instruments will be continuously tracked and periodic performance report from Trustee and MIS from Originators, if any would be scrutinized closely.

M. TRADING IN DERIVATIVES

The Fund's trading in derivatives would be in line that is permitted by SEBI Regulations from time to time. The Fund may use any hedging techniques that are permissible now or in future, under SEBI regulations, in consonance with the scheme's investment objective, including investment in derivatives such as interest rate swaps. The Fund shall fully cover its position in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market. The Fund shall maintain separate records for holding the cash and cash equivalents / securities for this purpose. The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all times.

SEBI in terms of paragraph 7.5 of the SEBI Master Circular for Mutual Funds dated May 19, 2023 permitted Mutual Funds to participate in the derivatives market at par with Foreign Institutional Investors (FII). Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts.

Debt Derivatives

The Scheme may use derivatives instruments like Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and as may be permitted under the Regulations and guidelines.

1. Interest Rate Swaps

Interest rate swap is a strategy in which one party exchanges a stream of interest for another party's stream. Interest rate swaps are normally 'fixed against floating' but can also be 'fixed against fixed' or 'floating against floating' rate swaps. Interest rate swaps will be used to take advantage of interest-rate fluctuations, by swapping fixed-rate obligations for floating rate obligations or swapping floating rate obligations to fixed-rate obligations. A floating-to-fixed swap increases the certainty of an issuer's future obligations. Swapping from fixed-to-floating rate may save the issuer money if interest rates decline. Swapping allows issuers to revise their debt profile to take advantage of current or expected future market conditions.

2. Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on

a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Advantages of Derivatives

The volatility in Indian debt markets has increased over last few months. Derivatives provide unique flexibility to the Scheme to hedge part of their portfolio. Some of the advantages of specific derivatives are as under:

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rates by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

Illustration: Interest Rate Swap (IRS)

Assume that a Mutual Fund has INR 10 crore, which is to be deployed in overnight products for 7 days. This money will be exposed to interest rate risk on daily basis. The fund can buy an Interest Rate Swap receiving fixed interest rate and paying NSE MIBOR.

The deal will be as under:

The cash flows on a notional principal amount of Rs. 10 crores would be-

(Rs. in Crore)

	Principal	NSE MIBOR	Interest	Amount	
Day 1		10.0000	8.10%	.0022192	10.00221918
Day 2		10.00222	8.20%	.0022466	10.00446575
Day 3		10.00447	8.30%	.002274	10.00673973
Day 4 (for 2 days)	Saturday	10.00674	8.15%	.0044658	10.01120548
Day 5	Sunday		Holiday		
Day 6		10.01121	8.40%	.0023014	10.01350685
Day 7		10.01351	8.50%	.0023288	10.01583562
Floating Interest Payable					.0158356164
Fixed Interest Receivable					.0167808219
Net Receivable for Mutual Fund receiving fixed					.0009452055

In this example, Mutual Fund stands to gain by receiving fixed rates. As the NSE MIBOR floating rate is decided daily, in adverse scenario, the Mutual Fund may have to pay the difference.

The counter-party providing Swap, Options, Forward Rate Agreements (FRAs) will do the same at a cost.

Risk factors Interest rate swaps strategy:

Risk Factor: The risk arising out of uses of the above derivative strategy as under:

- Lack of opportunities available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

- Interest rate swaps require the maintenance of adequate controls to monitor the transactions entered into, the ability to forecast failure of another party (usually referred to as the 'counter party') to comply with the terms of the derivatives contract.

Further the exposure limits for trading in derivatives by Mutual Funds specified by paragraph 12.24 and paragraph 12.25 of SEBI Master Circulars for Mutual Funds dated May 19, 2023 are as follows:

1. The cumulative gross exposure through debt, derivative positions (including fixed income derivatives), repo transactions in corporate debt securities and such other securities/assets as may be permitted by the Board from time to time should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the abovementioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme

6. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 1.
7. Definition of Exposure in case of Derivative Positions
8. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts

II. The risks involved in derivatives are:

1. The cost of hedge can be higher than adverse impact of market movements
2. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
3. An exposure to derivatives in excess of the hedging requirements can lead to losses.

4. An exposure to derivatives can also limit the profits from a genuine investment transaction.
5. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
6. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

III. Methods to tackle these risks:

1. Hedging will not be done on a carpet basis but based on a view about interest rates, economy and expected adverse impact.
2. Limits of appropriate nature will be developed for counter parties
3. Such an exposure will be backed by assets in the form of cash or securities adequate to meet cost of derivative trading and loss, if any, due to unfavorable movements in the market.

IV. The losses that may be suffered by the investors as a consequence of such investments:

1. As the use of derivatives is based on the judgment of the Fund Manager, the view on market taken may prove wrong resulting in losses.
2. The upside potential of investments may be limited on account of hedging which may cause opportunity losses.

V. The use of derivatives for hedging will give benefit of:

1. Curtailing the losses due to adverse movement in interest rates
2. Securing upside gains at cost

VI. VALUATION OF DERIVATIVES

- i. The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the SEBI Regulations.
- ii. The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the SEBI Regulations.

Security	Market Value (in Cr.)	Weight in the Portfolio	Yield (%)	Modified Duration	Weighted Modified Duration
GOI 7.35% 22.06.2024	50.00	10.64%	7.05	5.00	0.53
GOI 6.79% 15.05.2027	400.00	85.11%	7.03	6.85	5.83
GOI 6.68% 17/09/2031	20.00	4.26%	7.08	8.71	0.37
	470				
679GS2027 IRF	100.99				

- iii. Consider a hypothetical portfolio or a part of a larger portfolio composed of 3 different securities with a Portfolio Average Modified Duration of 6.74. On account of change in economic factors, it is expected that the interest rates could go up by 1% over the coming days. The portfolio would look to hedge the impact on this portfolio through selling IRF, of which the underlying security is different as given. This would be an example of imperfect hedge where the portfolio that is hedged and the instrument underlying the futures contract are different.
- iv. The maximum number of contracts in IRF to sold is given by the following formula (Market Value portfolio* Modified Duration of portfolio)/ (Market Value of 1 Futures contract* Modified Duration of futures)

Market Value Portfolio * Modified Duration Portfolio	31,654,557,509.18
Market Value of 1 Futures Contract	201,985.00
No of contracts to be sold	23,183.04
Market Value of Futures (in Cr.)	468.26
Negative Impact on Portfolio (in Cr.)	-31.65
Positive Gain on Futures (in Cr.)	31.65

- v. The impact on portfolio due to a 1% rise in yields is approx. Rs. 31.65 crs. Since the portfolio has sold IRF contracts, the gain on account of the same is around Rs. 31.65 crs. Accordingly, the loss on the underlying portfolio is hedged through IRF even as the underlying securities are different. The scheme would pursue imperfect hedging to the extent permitted by extant SEBI guidelines

VII. REPORTING OF DERIVATIVES

The AMC shall cover the following aspects in their reports to trustees periodically, as provided for in the Regulations:

- i. Transactions in derivatives, both in volume and value terms.
- ii. Market value of cash or cash equivalents / securities held to cover the exposure.
- iii. Any breach of the exposure limit laid down in the scheme Information document.
- iv. Shortfall, if any, in the assets covering investment in derivative products and the manner of bridging it.

The Trustees shall offer their comments on the above aspects in the report filed with SEBI under sub regulation (23) (a) of regulation 18 of SEBI Regulations.

N. DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks), Treasury Bills (issued by RBI) and the triparty repo.

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the G-sec markets and the overnight repo and triparty

repo are guaranteed and done by a central counterparty, the Clearing Corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on January 25, 2024:

Instruments	Indicative yield range
Overnight rates	6.70-6.75
90 day Commercial Paper	7.75-7.80
91-day T-bill	7.00-7.05
1 year G-Sec	7.13-7.17
5 year G – Sec	7.03-7.07
10 year G-Sec	7.15-7.19
1 year AAA Bond	7.80-7.85
5 year AAA Bond	7.75-7.78

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally, when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.

O. INVESTMENTS OF AMC IN THE SCHEME

In accordance with Regulation 25 (16A), the asset management company shall invest such amounts in such schemes of the mutual fund, based on the risks associated with the schemes, as may be specified by the Board from time to time. But the AMC shall not be entitled to charge any management fees on this investment in the scheme. The AMC may invest in the scheme, during the New Fund Offer, such amount, as they deem appropriate. In addition to investments under Regulation 25(16A) of the Regulations, the AMC may invest in the Scheme during NFO or during the continuous offer period subject to the SEBI (MF) Regulations. Investments by the AMC will be in accordance with Regulation 25(17) of the SEBI (MF) Regulations, 1996 which states that

"The asset management company shall not invest in any of its schemes unless full disclosure of its intention to invest has been made in the Scheme Information Document (SID), provided that the asset management company shall not be entitled to charge any fees on its investment in the scheme

4. **Applicable haircuts** - The applicable minimum haircut would be as per the extant RBI and SEBI guidelines. As per RBI circular RBI/2012-13/365 IDMD.PCD. 09/14.03.02/2012-13 dated 07/01/2013, all corporate bond repo transactions will be subject to a minimum haircut given as below. The minimum haircut will be applicable on the market value of the corporate debt securities prevailing on the day of trade of the 1st leg. The scheme may ask for a higher haircut (while lending) or give a higher haircut (while borrowing) depending on the prevailing market situation.

Rating	AAA	AA+	AA
Minimum Haircut	7.50%	8.50%	10%

Q. PROCEDURES FOLLOWED FOR INVESTMENT DECISIONS

The investment policy manual defines the broad guidelines for investments by various funds. Fund managers invest based on the offer document limits, regulatory limits and internal guidelines as set out in the Investment policy manual. Fund managers take input from the research team. The Head of Research will be heading the research team and will be responsible for the research output and performance. The transactions relating to the investments will be carried out by Debt and Equity Dealers. The processes and risks in the Investment activities will be monitored through a senior functionary reporting to the CIO. Investment committee is playing the role of governance and supervisory body for all investment related activities. The committee will hold a meeting on a periodic basis for a detailed review of portfolio holdings, scheme performance and investment strategy and also to ensure adherence to all internal processes. The risk origination for the investments is done based on the guidelines issued by SEBI and Board of Trustees. Concurrent auditors periodically check the limits and their reports are placed before the Audit Committee, which is comprised of the independent Directors and Trustees.
