Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) of the Units of SBI Gold ETF will be determined and disclosed on all business days or as may be prescribed by the SEBI Regulations. The NAV under SBI Gold ETF shall be calculated up to 4 decimals as follows or such other formula as may be prescribed by SEBI from time to time:

Market or Fair Value of Scheme's investments + Current Assets - Current Liabilities and Provision

NAV (in Rs. Terms) =
$$\frac{\text{Market or Fair Value of Scheme's investments + Current Assets - Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

NAV Information: NAV will be disclosed in the manner as may be prescribed under SEBI (Mutual Funds) Regulations, 1996. NAV can also be viewed on www.sbimf.com and www.amfiindia.com. The AMC shall update the NAVs on the website of Association of Mutual Funds in India – AMFI (www.amfiindia.com) and on website of the Mutual Fund (www.sbimf.com) by 11.00 p.m. on every business day.

In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

The information on NAV including sale or purchase price of the units of SBI Gold ETF may be obtained by the unitholders, on any business day from the office of the AMC / the office of the Registrar or any of the Investor Service Centres. Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV

Illustrative example:

- **NAV for continuous offer**

Price of 1 gm gold (Assumed market on allotment date)	1	1300
Value of 1 kg gold (i.e., 1 portfolio deposit or 1 creation unit)	2	1,300,000
Cash Component (say)	3	1,000
Net Assets	4= (2+3)	1,301,000
No. of units in creation unit	5	115000
NAV	6= (4/5)	11.31

- **Purchase from Stock Exchanges**

An investor can buy units of the Scheme on a continuous basis on the Stock Exchange where the Scheme units are listed and traded like any other publicly traded securities at prices which may be close to the actual NAV of the Scheme. There is no load for investors transacting on the stock exchange. However, there would be cost of brokerage and other transaction costs payable to broker or sub-broker of the exchange.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2018 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2018, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

- a. For exit on or before 12 months from the date of allotment – 1.00%
- b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2019; say December 1, 2018, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-1%) = Rs. 11.988/-

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2019; say April 1, 2019, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-0) = Rs. 12/-

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2018/92 dated June 05, 2018.

Illustration on Computation of NAV:

If the net assets of the Scheme are Rs. 10,55,40,345.34 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: $10,55,40,345.34 / 1,00,00,000 = \text{Rs. } 10.5540$ p.u. (rounded off to four decimals)

Section II

I. Introduction

A. Definitions/interpretation

Please refer the definitions/interpretation as disclosed on our website under:
<https://www.sbimf.com/offer-document-sid-kim>

B. Risk factors

Scheme Specific Risk Factors:

Scheme investing in Gold

- The NAV of the units is closely related to the value of gold held by the scheme. The value (price) of gold may fluctuate for several reasons and all such fluctuations will result in changes in the NAV of units under the scheme. The factors that may effect the price of gold, among other things, include demand and supply for gold in India and in the Global market, Indian and Foreign exchange rates, Interest rates, Inflation trends, trading in gold as commodity, legal restrictions on the movement/trade of gold that may be imposed by RBI, Government of India or countries that supply or purchase gold to/from India, trends and restrictions on import/export of golden jewellery in and out of India, etc.
- Counter party Risk: There is no Exchange for physical gold in India. The Mutual Fund may have to buy or sell gold from the open market, which may lead to counter party risks for the Mutual Fund for trading and settlement.
- Liquidity Risk: The Mutual Fund has to sell gold only to bullion bankers/traders who are authorized to buy gold. Though, there are adequate numbers of players (commercial or bullion bankers) to whom the Fund can sell gold. Fund may have to resort to distress sale of gold if there is no or low demand for gold to meet its cash needs of redemption or expenses.
- Currency Risk: The formula for determining NAV of the units is based on the imported (landed) value of gold. The landed value of gold is computed by multiplying international market price by US dollar value. The value of gold or NAV, therefore will depend upon the conversion value of US dollar into Indian rupee and attracts all the risks attached to such conversion.
- Regulatory Risk: Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Market Makers to arbitrage resulting into wider premium/ discount to NAV. Any changes in the regulations relating to import and export of gold or gold jewellery (including customs duty, sales tax and any such other statutory levies) may affect the ability of the scheme to buy/sell gold against the purchase and redemption requests received.
- Asset Class Risk: The returns from physical Gold in which the Scheme invests may under perform returns from the securities or other asset classes.
- Physical gold: There is a risk that part or all of the Scheme's gold could be lost, damaged or stolen. Access to the Scheme's gold could also be restricted by natural events or human actions. Any of these actions may have adverse impact on the operations of the scheme and consequently on investment in units.
- As the scheme proposes to invest not less than 95% of the net assets in Gold, the Scheme is a passively managed scheme and provides exposure to Gold and Gold bullion and tracking its performance and yield as closely as possible. The Schemes' performance may be affected by a general price decline in the Gold prices. The Scheme invests in the physical Gold regardless of their investment merit. The Mutual Fund does not attempt to take defensive positions in declining markets.
- Tracking error may have an impact on the performance of the scheme. However, the AMC will endeavour to keep the tracking error as low as possible.
- Investors may note that even though this is an open-ended scheme, they will have to buy or sell units of the scheme on the stock exchanges where these units are listed for liquidity at the market price, subject to the rules and regulations of the exchange.
- The market price of SBI- Gold ETF units, like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the unit (or NAV), and (2) demand and supply of units in the market.

- Sizeable demand or supply of the units on exchange may lead to market price of the units to quote at premium or discount to NAV. Hence the price of SBI- Gold ETF is less likely to hold significant variance (large premium or discount) from the latest declared NAV all the time.
- The Fund may have to sell gold to meet recurring expenses. In such an event, irrespective of whether the price of gold goes up or not, the NAV of the Fund will go down due to such expenses.
- The NAV of the units is determined based on the formula for valuation of gold prescribed by SEBI whereas the actual price of gold in the market may be different from the value of gold arrived at based on the prescribed formula. This may lead to extreme conditions like NAV being far too different from the domestic market price of gold. In such extreme conditions, the Trustee reserves the right to delay or suspend the redemption of units.
- The units of SBI- Gold ETF will be issued only in Demat form through depositories. The records of the depository are final with respect to the number of units available to the credit of unit holder. Settlement of trades, repurchase of units by the mutual fund depends up on the confirmations to be received from depository on which the mutual fund has no control.
- Conversion of the underlying physical Gold to SBI- Gold ETF may attract capital gains tax depending on acquisition cost and holding period. Repurchase of SBI- Gold ETF the Fund or sale of SBI- Gold ETF stock Exchange may attract capital gain tax depending upon the holding period of the units.
- SBI- Gold ETF is not an equity oriented Fund; therefore, tax benefit related to equity oriented Fund will not be available.

Scheme investing in Debt and Money Market Instruments

- SBI- Gold ETF will be investing in debt instruments, and money market instruments. Trading volumes and settlement periods inherently restrict the liquidity of the scheme's investments.
- Different types of securities in which the scheme would invest carry different levels of risk. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern. For e.g. corporate debt carry a higher amount of risk than money market instruments. Further even among corporate debts, instruments, which are AAA rated, are comparatively less risk than instruments, which are AA rated.
- Credit risk: Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations.
- Liquidity risk: Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.
- Interest Rate risk: Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk
- Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.

Risks pertaining to transaction in units through Stock Exchange Mechanism

1. Absence of Prior Active Market: Although the Scheme is listed on NSE, there can be no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the Units of the Scheme would be infrequent.
2. Trading in Units may be Halted: Trading in the Units of the Schemes on NSE may be halted because of market conditions or for reasons that in view of NSE or SEBI, trading in the Units of the Schemes are not advisable. In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to NSE and SEBI 'circuit filter' rules. There can be no assurance that the requirements of NSE necessary to maintain the listing of the Units of the Schemes will continue to be met or will remain unchanged.
3. Lack of Market Liquidity: The Schemes may not be able to immediately sell certain types of illiquid Securities. The purchase price and subsequent valuation of restricted and illiquid Securities may reflect a discount, which may be significant, from the market price of comparable Securities for which a liquid market exists.

4. Units of the Schemes May Trade at Prices Other than NAV: The Units of the Schemes may trade above or below their NAV. The NAV of the Schemes will fluctuate with changes in the market value of the holdings of the Schemes. The trading prices of the Units of the Schemes will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Schemes. However, given that Units of the Schemes can be created and redeemed in Creation Units directly with the Fund, it is expected that large discounts or premiums to the NAV of Units of the Schemes will not sustain due to arbitrage opportunity available.
5. Regulatory Risk: Any changes in trading regulations by NSE or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.
6. Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the Securities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
7. Risk of Substantial Redemptions: Substantial Redemptions of Units within a limited period of time could require the Schemes to liquidate positions more rapidly than would otherwise be desirable, which could adversely affect the value of both the Units being Redeemed and that of the outstanding Units of the Schemes. The risk of a substantial Redemption of the Units may be exacerbated where an investment is made in the Schemes as part of a structured product with a fixed life. Please also refer to the sections on 'right to limit Redemptions' and 'suspension of Purchase / Redemption / switch of Units' in the Statement of Additional Information. Regardless of the period of time in which Redemptions occur, the resulting reduction in the NAV of the Schemes could also make it more difficult for the Schemes to generate profits or recover losses. The Trustee, in the general interest of the Unit holders of the Schemes offered under this SID and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be Redeemed on any Working Day depending on the total "Saleable Underlying Stock" available with the Fund.

Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non guaranteed basis. Credit risks could arise if the counterparty does not return the security as contracted on due date. The liquidation of underlying bonds in case of counterparty default would depend on the liquidity of the bond and market conditions at that time. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

Risk of investing in Gold Monetisation Scheme (GMS)

SBI- Gold ETF may, as permitted by SEBI, invest a part of its pool of physical gold assets in Gold Monetisation Scheme run by Banks. Under the GMS, SBI- Gold ETF will deposit its physical gold assets as principal with the Banks which offer such facility ("the issuer"). A situation could arise where the issuer is unable to return the principal physical gold to SBI -Gold ETF upon maturity or in case of an early redemption. Such inability to return physical gold could arise on account of liquidity problems or general financial health of the issuer. A default by the issuer under a GMS may result in losses to the Unit holders. GMS being an unlisted and non-transferrable security can be Redeemed only with the issuer and hence, is subject to the risk of an issuer's inability to meet principal and interest payments on the obligation (credit risk). Credit Risk means that the issuer of a Security may default on interest payments or even paying back the principal amount on maturity (i.e. the issuer may be unable to make timely principal and interest payments on the Security) which may result in losses to the Unitholders.

Risk Factor in respect of investment in TREPs

- i) **Interest rate risk:** This risk arises from uncertainty in the rate at which cash flows from the securities may be reinvested. While the rate of interest for TREPs remains closely correlated to the repo rate, it also may vary based on inter-bank lending demand & supply. Hence, there remains a risk of rate at which TREPs will get re-invested.

ii) **Settlement risk:** Since the settlement for TREPs happens through CCIL, the risk of default from counterparty is limited. However, in case a clearing member fails to honour their settlement obligations, the “Default Waterfall” mechanism is used to make complete the settlement process. As per the waterfall mechanism, 1st step: the defaulter's margins and the defaulter's contribution to the default fund have been appropriated; 2nd step: CCIL's contribution is used to meet the losses; 3rd step: Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Hence, the scheme is subject to the risk of loss to the extent of initial margin and default fund contribution being invoked in the event of failure of any settlement obligations.

Risk associated with Partial Execution :

When MMs or large investors come directly to the AMC for creation/ redemption in creation unit size, there could be instances of corporate action such as merger/ demerger of companies or market volatility due to which certain stocks may hit the upper or lower circuit or may be unavailable for trade. While the endeavour is to completely replicate the constituents of the underlying index, it may not be possible at times in the above mentioned scenarios. This may have a bearing on processes such as, including but not limited to, the usual unit allotment timelines, price at which the particular stock may be allocated to the investor, refund timelines etc. and may impact the tracking error as well.

Tracking Error Risk

The Fund Manager may not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index.

The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the ETF/ Index Fund (other than Debt ETFs/ Index Funds) based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

Tracking Difference Risk

The Fund Manager may not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index.

Tracking Difference is the Difference of returns between the Scheme and the Benchmark Index annualized over 1 year, 3 Year, 5 Year, 10 year and Scheme Since Inception period. It will be the endeavor of the fund manager to keep the tracking difference as low as possible.

Tracking Difference shall be disclosed only if the scheme has completed 1 year period.

Tracking difference is to be disclosed on a monthly basis on www.sbfimf.com and AMFI website.

C. Risk mitigation strategies

Investments in debt, money market instruments carry various risks such as inability to sell securities, trading volumes and settlement periods, market risk, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification and hedging.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigates.

For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk. Hence, while the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable.

Credit Risks

Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. To that extent the Volatility risk will be mitigated in the scheme.

II. Information about the scheme:

A. Where will the scheme invest –

The Scheme will invest in the following instruments ;

- i. Gold, gold bullion and gold related securities/instruments
- ii. Debt & Money Market Instruments and repo in corporate debt

DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Portfolio Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) , Treasury Bills (issued by RBI) and the Triparty Repo

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC

market. The settlement of trades both in the Gsec markets and the overnight repo and Triparty Repo are guaranteed and done by a central counterparty, the Clearing corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on June 18, 2024:

Instruments	Indicative yield range (%)
Overnight rates	6.70-6.75
90 day Commercial Paper	7.10-7.15
91-day T-bill	6.80-6.85
1 year G-Sec	7.00-7.05
5 year G – Sec	7.10-7.15
10 year G-Sec	7.15-7.20
1 year AAA Bond	7.60-7.65
5 year AAA Bond	7.65-7.70

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.
